

The SoReMo Initiative

ILLINOIS INSTITUTE OF TECHNOLOGY

Optimizing client flow in food pantries via discrete-event simulation

Leonardo Marciaga

Department of Applied Mathematics

January 15, 2026

Operational challenges

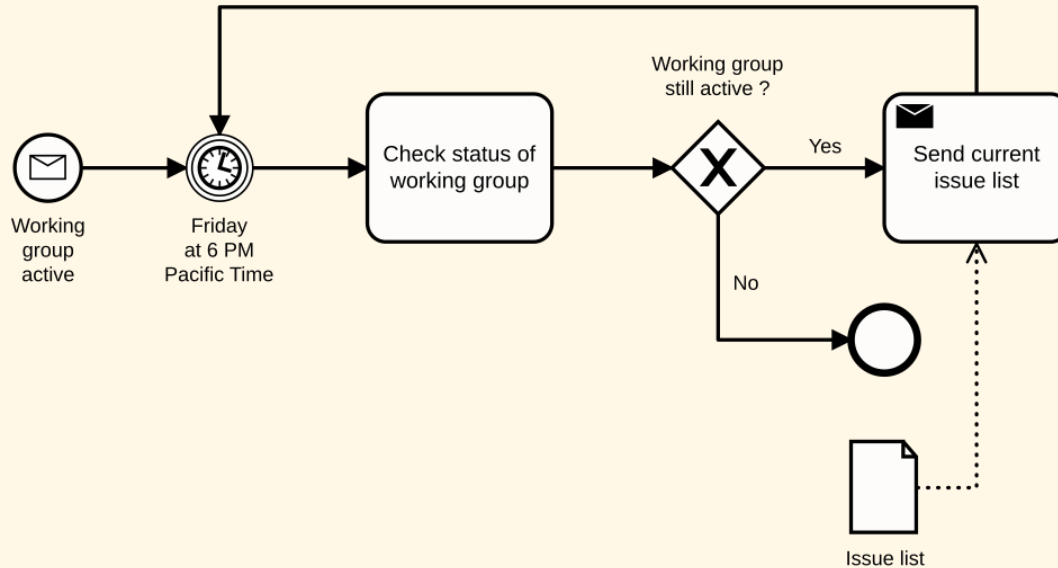

Uncertainty in
demand and
volunteer staff

System throughput
vs. service
autonomy

Data scarcity

Goal: aid a local food pantry to address these issues, ensuring accuracy and accessibility.

Process maps

Discrete-event simulation helps model and understand process maps.
